

## Education

- **Harvard University** Cambridge, MA  
*PhD in Applied Physics* Expected May 2018
  - Working Thesis Title: *Microbial Evolutionary Dynamics and Transport*
  - Applied stochastic, random-walk methods (spatial stochastic differential equations) to model the evolutionary dynamics of growing microbial colonies
  - Utilized fluid and solid mechanics to simulate microbial colony morphology
- **Harvard University** Cambridge, MA  
*PhD Secondary Field: Computational Science and Engineering (CSE)* Expected May 2018
  - Completed advanced applied math and scientific computing courses
  - Learned state-of-the-art computational methods used in scientific research and data science
  - **Capstone:** Developed an OpenCL powered Lattice Boltzmann fluid mechanics simulation utilizing OpenGL for real-time visualization.
- **Harvard University** Cambridge, MA  
*S.M. in Applied Physics* November 2014
  - Completed 12 courses: 4 physics core courses, 4 CSE courses, and 4 soft-matter/biophysics electives
  - GPA: 3.95/4.00
- **Case Western Reserve University** Cleveland, OH  
*Bachelor of Science in Engineering, Engineering Physics* May 2012
  - GPA: 4.00/4.00, Summa Cum Laude, Valedictorian
  - Engineering Concentration: Aerospace Engineering
  - Senior Project: Simulating Interactions between Confined Spins and Ferromagnetic Vortices

## Certifications

- **Engineer in Training (EIT)** Ohio  
*Active* September 2012
  - Successfully passed Fundamentals of Engineering Exam, the first step towards becoming a licensed Professional Engineer (PE)

## Engineering Skills

- Expert at creating experiments, models, and numerical simulations to understand the transport of mass, momentum, and energy/heat in complex fluids
- **Analytical and Numerical Skills**
  - Ability to mesh and simulate fluid flows containing chemical reactions using standard open-source tools (OpenFOAM, gmsh, SALOME) or custom-built GPU-powered Lattice Boltzmann tools
  - Experience simulating multicomponent multiphase flows using the Lattice Boltzmann technique
  - Expert knowledge of Applied Mathematics, especially stochastic modeling involving the Master equation, the Fokker-Planck equation (PDEs), and (spatial) stochastic differential equations
  - Ability to efficiently create and calibrate physical models to experiment through core physics training
- **Experimental Skills**
  - Expert at designing and conducting biological and soft matter experiments involving complex fluids; four years of research in a molecular biology laboratory
  - Experienced using rheometers to quantify fluid rheology

- Significant experience using microscopy to image microbial colonies and using computational tools to analyze the images

## Computational Skills

- Developed over 30 GitHub repositories and wrote hundreds of Jupyter/IPython notebooks to create scientific simulations and analyze experimental data during my PhD (see my website above)
- Over 8 years of experience optimizing programs to run on multiple processors, graphics processing units (GPUs), and supercomputers
- Expert at using Jupyter/IPython Notebooks to explore, visualize, and analyze large tabular datasets and large collections of images
- Experienced at applying stochastic techniques to model and solve high-dimensional problems
- **Languages for General Scientific Computing:**
  - Python, Cython, OpenCL, CUDA, C, C++, Java, Mathematica, Matlab
- **Selected Python Packages and Tools:**
  - IPython/Jupyter Notebook, matplotlib, seaborn, numpy, scipy, pandas, scikit-image, pymc3, cython, cython.gsl, PyOpenCL, PyCuda
- **Fluid and Solid Mechanics Simulations:**
  - Lattice Boltzmann Method (custom-built code), OpenFOAM, SALOME, gmsh
- **Image Analysis Tools**
  - Python, OpenCL, ImageJ/Fiji

## Fellowships and Awards

- **Institute for Applied Computational Science Scholarship** Cambridge, MA  
*Graduate Student* September 2016 - September 2017
  - Wrote proposal and won a \$25,000 student scholarship from Harvard’s Institute for Applied Computational Science (IACS)
  - Used funds to further develop my IACS capstone: an OpenCL-powered Lattice Boltzmann fluid mechanics simulator utilizing OpenGL for real-time visualization
- **Department of Energy Office of Science Graduate Fellowship** Washington, D.C.  
*Graduate Student* September 2012 - September 2015
  - Wrote proposal to win a competitive fellowship that supports students pursuing training in areas relevant to Department of Energy (DOE). Selected out of 1,300 applicants; 50 fellowships awarded
  - Attended yearly conferences at National Laboratories; presented posters on my active research, networked with other DOE fellows and government officials
- **Harvard University Pierce Fellow** Cambridge, MA  
*Graduate Student* September 2012 - September 2015
  - Won fellowship awarded to the highest caliber PhD students accepted into Harvard’s School of Engineering and Applied Sciences (SEAS). Selected out of 150 students; 8 fellowships awarded

## Publications
